

Dynamic Group Management Solution

Automate and maintain routine, error prone tasks for accurate and up to date groups.

What Does GroupID Automate Offer?

Smart Group Membership

Groups are automatically updated anytime user information changes.

Improve Directory Consistency and Security

Ensure users are not over-privileged.

Reduce Support Calls by Automating Manual and Redundant Administrative Tasks

Automation empowers IT to establish policy and workflow around how groups should be maintained.

Reduce Human Error with Query-based Group Definitions

Product Features

Nested Groups - Intelligently nest groups with a few clicks

Accelerate creation of group hierarchies (based on common criteria) with automated Dynasties.

PowerShell extensibility

Programmatically extend GroupID into existing processes.

Transfer ownership wizard

Transfer ownership of all groups owned by one user to another in one step.

Imported Source Queries

Query sources when data is stored outside of a common directory.

Support multiple data sources

Support a multitude of identity-based directories and messaging platforms both on premise and in the cloud, including Active Directory, Azure Active Directory, generic LDAP based directories, and messaging platforms such as Exchange Server, Office365, and Google G Suite.

Password expiration notification

GroupID Automate will create a list of accounts with expiring passwords and send out reminders. This can be combined with the GroupID Password Center module for a complete self-service password reset solution.

“

It was critical that customized packages be distributed to various groups as they required different levels of detail. With Imanami GroupID Automate, we were able to customize this in 15 minutes. What would have been a many-day project in the past was so simple.”

Paul Lubold

Infrastructure & Operations Manager - Office of Attorney General's IT Section

About Imanami
